Frank R. Spellman : Dam Sector Protection and Homeland Security (Homeland Security Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Dam Sector Protection and Homeland Security (Homeland Security Series):

The sixth of a new, well-received and highly acclaimed series on critical infrastructure and homeland security, Dam

Protection and Homeland Security is a reference source that is designed to serve and advise U.S. project designers, engineers, managers, superintendents and supervisors of dams, navigation locks, levees, dikes, hurricane barriers, mine tailings and other industrial waste impoundments, and other similar water retention and water control facilities who want quick answers to complicated questions. It is intended to help employers and employees handle security threats they must be prepared to meet on a daily basis. In the post-September 11 world, the possibility of dam infrastructure terrorism—the malicious use of weapons and cyber intrusion to cause devastating damage to the dam infrastructure sector along with, literally, its cascading effects—is very real. Thus, the need is clear and so is the format and guidelines presented in this text to improve protection and resilience of the dams infrastructure sector. This book describes the sector-wide process required to identify and prioritize assets, assess risk in the sector, implement protective programs and resilience strategies, and measure their effectiveness.
