**International Monetary Fund. External Relations Dept. : Finances et Developpment, Septembre 2011: 48 (French Edition)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Finances et Developpment, Septembre 2011: 48 (French Edition):

All for One examines inequality and the many ways it matters. In our overview article, the World Bank's Branko Milanovic explains how income inequality is measured and tells us that it's increased in most countries. The good news, he says, is that global inequality--between countries--could be on the downturn. IMF economists Andrew Berg and Jonathan Ostry find that a more equal society has a greater likelihood of sustaining longer-term growth. Other IMF research on inequality finds that financial sector development not only 'enlarges the pie' by supporting economic growth but divides it more evenly; that higher income inequality in developed countries is associated with higher indebtedness--at home and abroad; and that while fiscal consolidation is necessary in the medium term, slamming on

the brakes too quickly can harm jobs and cut wages, exacerbating inequality. Also in this issue, we profile Elinor Ostrom, the first woman to receive the Nobel Prize for economics. In a tour of the globe, we look at how the African diaspora can help their home countries from afar, try to draw some early lessons from the euro area's debt crisis, investigate how the United States and its neighbor Canada handled public debt--with different results, and find out about the rise of emerging markets as systemically important trading centers. Back to Basics explains the difference between micro- and macroeconomics, and Data Spotlight tells us about a new worldwide survey of foreign direct investment.
