Bang Nam Jeon, Maria Pia Olivero : Global Banking, Financial Markets and Crises: 14 (International Finance Review) before purchasing it in order to gage whether or not it would be worth my time, and all praised Global Banking, Financial Markets and Crises: 14 (International Finance Review):

One of the most salient features of the 2007-9 global financial crisis was the role played by global banking and

multinational banks in transmitting international financial shocks and maintaining credit stability in domestic and international financial markets. This edited volume on "Global Banking, Financial Markets and Crises" contains original papers that examine various issues concerning the changing role of global banks during crisis periods. The papers in this volume also address the impact of global financial crises on multinational banking, domestic and international financial markets, and emerging economies. Particular emphasis is given on the regional experiences of cross-border banking, domestic and global financial market integration, portfolio investment, cross asset market spillovers, cross country crisis contagion, monetary policy transmission mechanism, and the role of foreign banks during crisis periods compared to non-crisis periods in various advanced countries as well as emerging economies. This volume also presents various important policy implications and lessons from recent global financial crises.

This 14th volume of 'International Finance' has been compiled in order to further a better understanding of the relationship between global banking and domestic financial markets in furtherance of better policy. Following the introductory chapter summarizing the volume's contributions, 14 chapters are presented in sections on: global banking and crises, financial markets and crises, crisis spillovers to emerging economies, and policy implications and lessons. Specific topics include international balance sheet perspectives on recent cross-border banking within Europe, the interbank market and bank lending in the implementation of monetary policy in China, the impact of domestic and international monetary policy news on US and German bank stocks, the evidence regarding return and volatility spillovers from major bank stocks to the national stock market in the UK, the economic impact of the Eurozone sovereign debt crisis on developing Asia, the transmission of external financial shocks through financial integration and foreign banks in Latin America, bank creditor structure and bank risk during liquidity crises, and evidence from the US syndicated loan market in relation to bank monitoring and acquirer returns. Distributed in North America by Turpin Distribution. --Annotation copy;2014 Ringgold Inc.
