Beniamino Moro, Victor A. Beker : Modern Financial Crises: Argentina, United States and Europe (Financial and Monetary Policy Studies) before purchasing it in order to gage whether or not it would be worth my time, and all praised Modern Financial Crises: Argentina, United States and Europe (Financial and Monetary Policy Studies):

This book is devoted to the analysis of the three main financial crises that have marked this century: 2001 Argentina's defaulting on its external debt, the American subprime crisis in 2008, and the current European debt crisis in Europe. The book pursues three major objectives: firstly, to accurately portray these three financial crises; secondly, to analyze what went wrong with mainstream economic theory, which was unable to foresee these types of economic turmoil; and thirdly, to review macroeconomic theory, re-evaluating Keynes's original contribution to economic analysis and pointing out the need to rebuild macroeconomics with a view to studying economic illness rather than trying to prove the non-existence of economic problems.
