**From Springer : Optimal Strategies in Sports Economics and Management** before purchasing it in order to gage whether or not it would be worth my time, and all praised Optimal Strategies in Sports Economics and Management:

During the last century, we have witnessed the birth and evolution of sport as an economic activity, which has created

jobs on the one hand, but also problems of management on the other. This process has not been immune from the particular characteristics associated with sport, typically united here more than in other activities: technique, physical effort, entertainment and passion. And all this within a framework of ever-increasing consumption of financial resources. It is not surprising, therefore, that commonly-used economic models, based on mechanistic approaches, do not provide a viable solution to increasingly complex and increasingly frequent problems. Any attempt to apply such an approach in this technical, economic and financial context can only result in failure. The high degree of subjectivity inherent in sporting activity requires new tools, in which remodeled conceptual, theoretical and technical elements should play an important role. Complexity, uncertainty and subjectivity are therefore basic to understand, and deal with, the phenomenon of sport. The necessity of resorting to these elements was identified over a quarter of a century ago by a small group of professors and researchers at the University of Barcelona. Together we started the first postgraduate courses and organized seminars to alert sports centre managers, as well as to make private and public organizations aware of the increasing importance of a proper, specific management for sports organizations.

**From the Back Cover** This volume presents original contributions from renowned researchers in sports economics, management, and optimization. The book discusses up-to-date developments in several topics, including resource allocation strategies in sports industry, impact of the financial crisis on professional sports around the world, fairness in sports competitions, and optimization-based gambling strategies. "Optimal Strategies in Sports Economics and Management" will be of interest not only to students, researchers and practitioners involved with the sports industry, but also to the general public interested in sports such as soccer, hockey, American football, basketball, golf, and jai alai. **About the Author** Panos M. Pardalos is one of the leading experts in global optimization and control theory. V. Yatsenko's research is connected with control of bilinear systems, nonlinear estimation, control of quantum systems, and global optimization problems. Both Pardalos and Yatsenko have authored numerous publications including books and well-known scientific journals.
